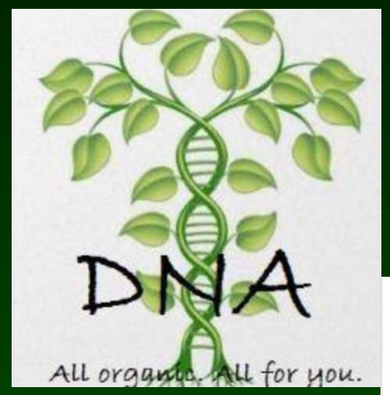
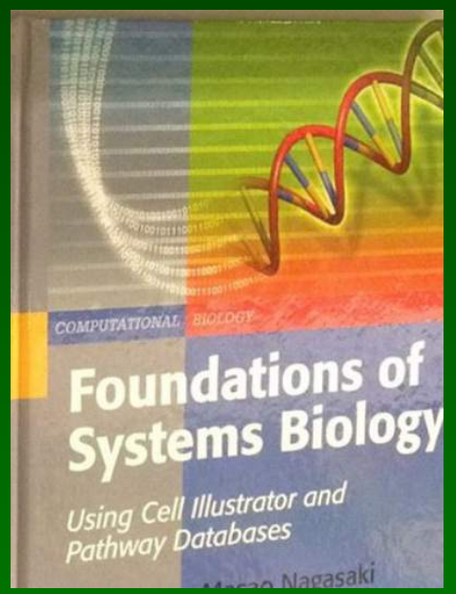
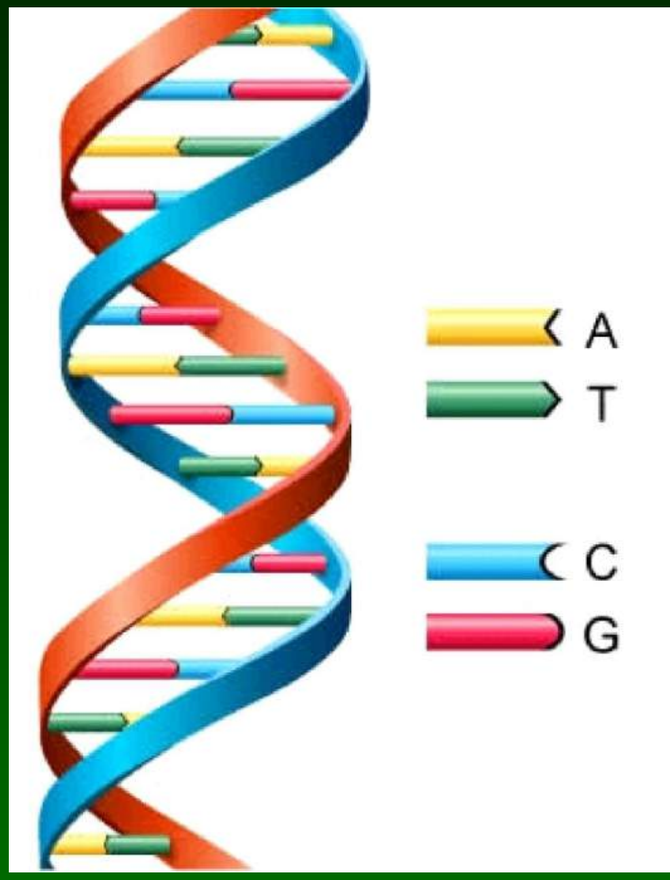
did you pay attention at school?







correct !

Functional assays

confirm predicted consequences

tinyurl.com / VEPTC2018-19

Johan den Dunnen

The question

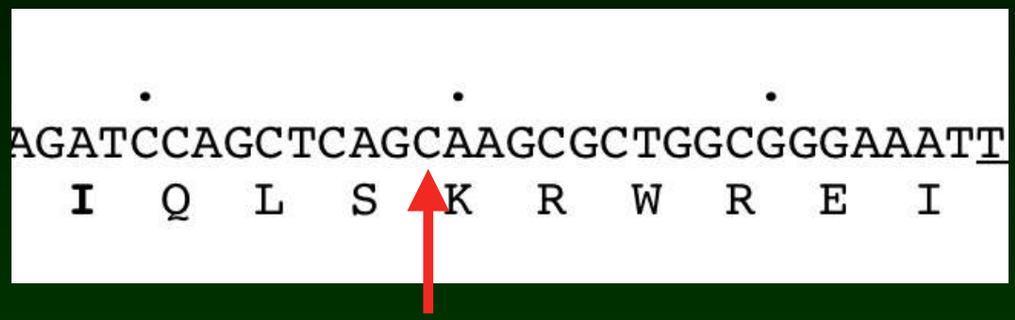
I found a variant and want to know whether it may be related to the health problems I see in the individual

What can I try in the lab ??

(not computer predictions)

Share !!

DMD gene



c.5859C>T r.(?) p(Ser1953=)

found in diagnosis

prenatal
at risk family muscular dystrophy
no definite diagnosis

found in diagnosis

WES, trio analysis
male parent
45y, healthy
one of many variants

you may have life saving information, did you realize ?

Database submission 1st

first example,

many should follow

VOLUME 46 | NUMBER 2 | FEBRUARY 2014 188

Loss-of-function mutations in *MICU1* cause a brain and muscle disorder linked to primary alterations in mitochondrial calcium signaling

About this overview [Show]

Patient data (#0030375)	
Phenotype	dystrophy, muscular, limb-girdle
Phenotype additional	-
Reference	2-generation family, brother-1, Netherlands:Leiden
Remarks	-
Geographic origin	Netherlands
Ethnic origin	-
Gender	M
Inheritance	familial, autosomal recessive
Consanguinity	no
Fam_Pat	1 (2)
# reported	1
CK level	-
Protein data	-
Submitter	Marjolein Kriek

Date created
2013-05-21 21:46:21

Variant data	
Allele	Paternal (confirmed)
Reported pathogenicity	Probably pathogenic
Concluded pathogenicity	Unknown
Exon	8i
DNA change	c.741+1G>A (View in UCSC Genome Browser, Ensembl)
Var_pub_as	-
RNA change	r.741_742ins741+1_741+155{741+1g>a}
Protein change	p.Val248Thrfs*9
DB-ID	MICU1_00001
Variant remarks	whole exome sequencing; fibroblast RNA; NOTE: causality MICU1 variants not absolutely proven, yet highly likely
Genet_ori	germline (inherited)
Segregation	yes
Reference	-
Template	DNA, RNA
Technique	RT-PCR, SEQ, NGS-I

Topics

- share first, then...
- analyse cells / tissue
- RNA consequences
- protein consequences
- animal model
- …
- *(not computer predictions)*

The sample

- **blood**

DNA collected, sample also contains...

RNA

protein

cells

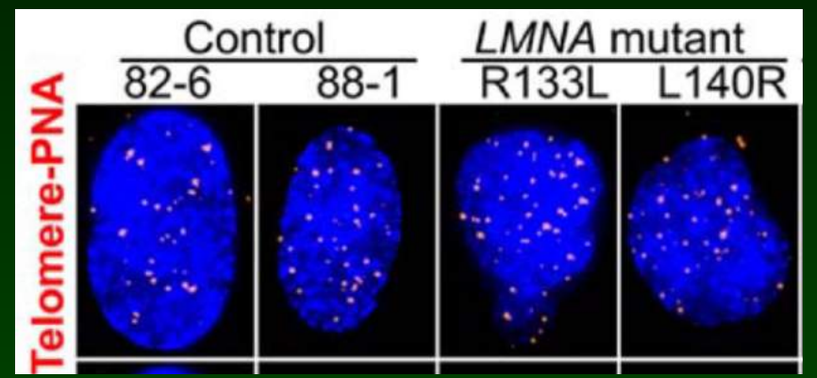
-use the opportunity

-get new sample difficult

-store

Tissues

- **analyse tissue from the patient**
  works for cancer, rare in other cases
  e.g muscle biopsy



- **look**
  abnormal structures
  e.g. LMNA irregular shaped nucleus
  ...required for expression cloning

- **stain**
  protein *(antibody)*
  abnormal amount / location / …
  RNA *(probe)*
  abnormal amount / location / …

Tissues

- **effects can be direct or indirect**

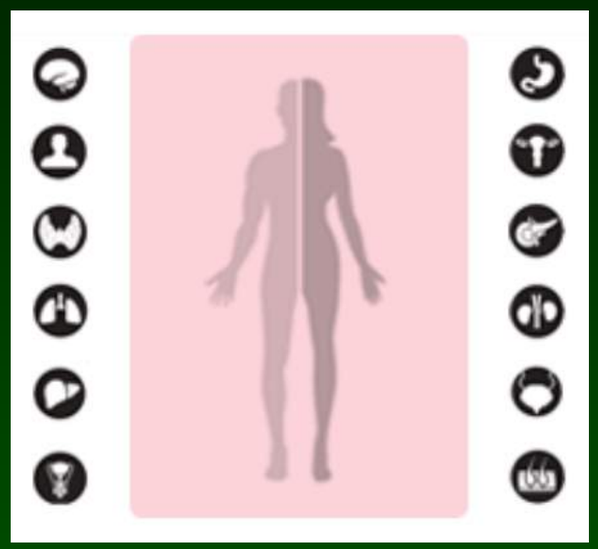
- **effect is full-genome**

influenced by all other variants in genome

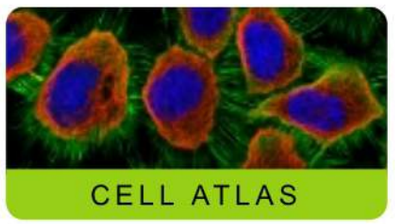
> proof by adding 1 variant to known genome

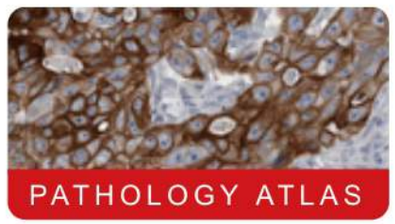
Proteins

THE HUMAN PROTEIN ATLAS



www.proteinatlas.org





antibodies

Tissues / cells

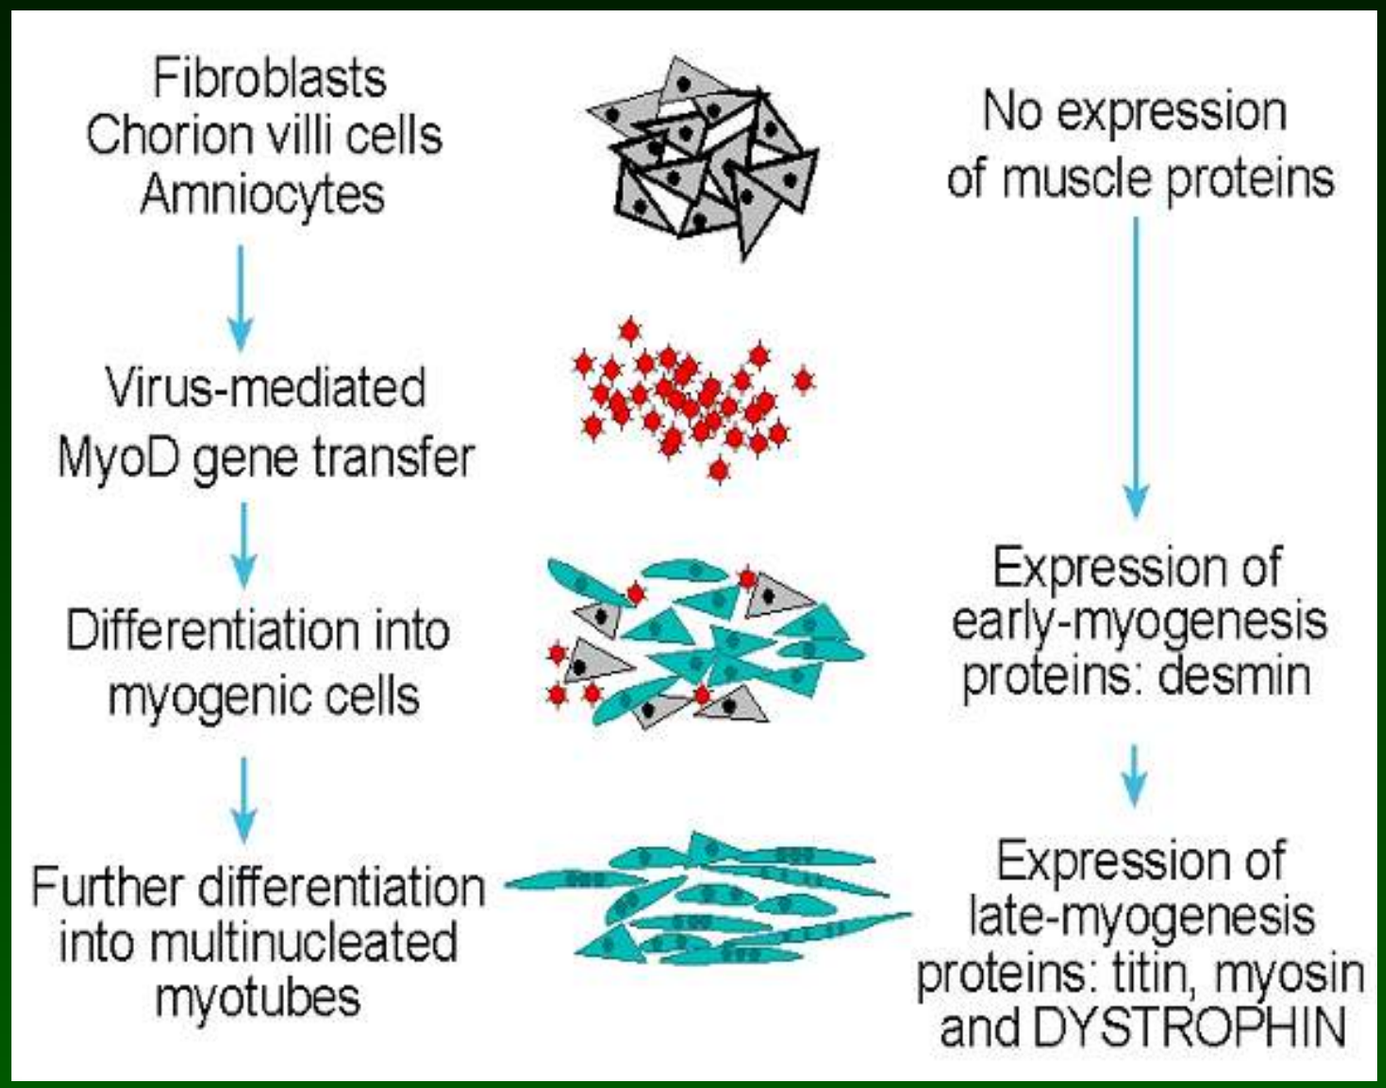
- **isolate DNA, RNA, protein**
- **cell extract / purified protein**
  measure activity (enzyme)
- **protein**
  detect amount / size *(antibody)*
  (co-)immunoprecipitation, …
- **RNA**
  detect amount / size *(probe)*
  study expression profile
  Protein Truncation Test = make protein

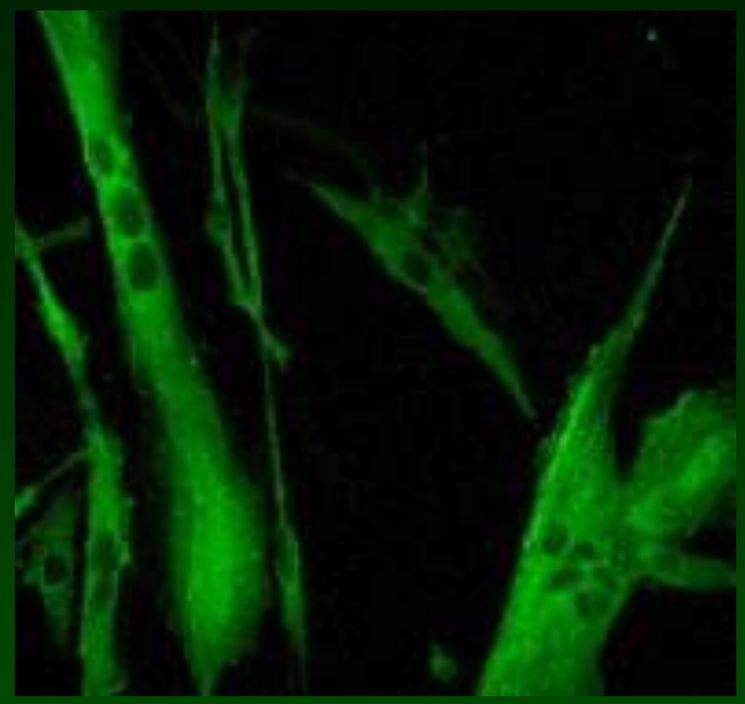
Patient cells

- **cell culturing**
  grow under specific conditions, test function
- **complementation**
  fuse cells, problem remains/solved ?
  Fanconi anemia, peroxisomal genes, …
- **expression cloning**
  express wt sequence in cell: normalised?
- **...tissue specific expression**
  reprogram cell
  myoD transfection > muscle cell
  IPS > lineage specific culturing

MyoD differentiation

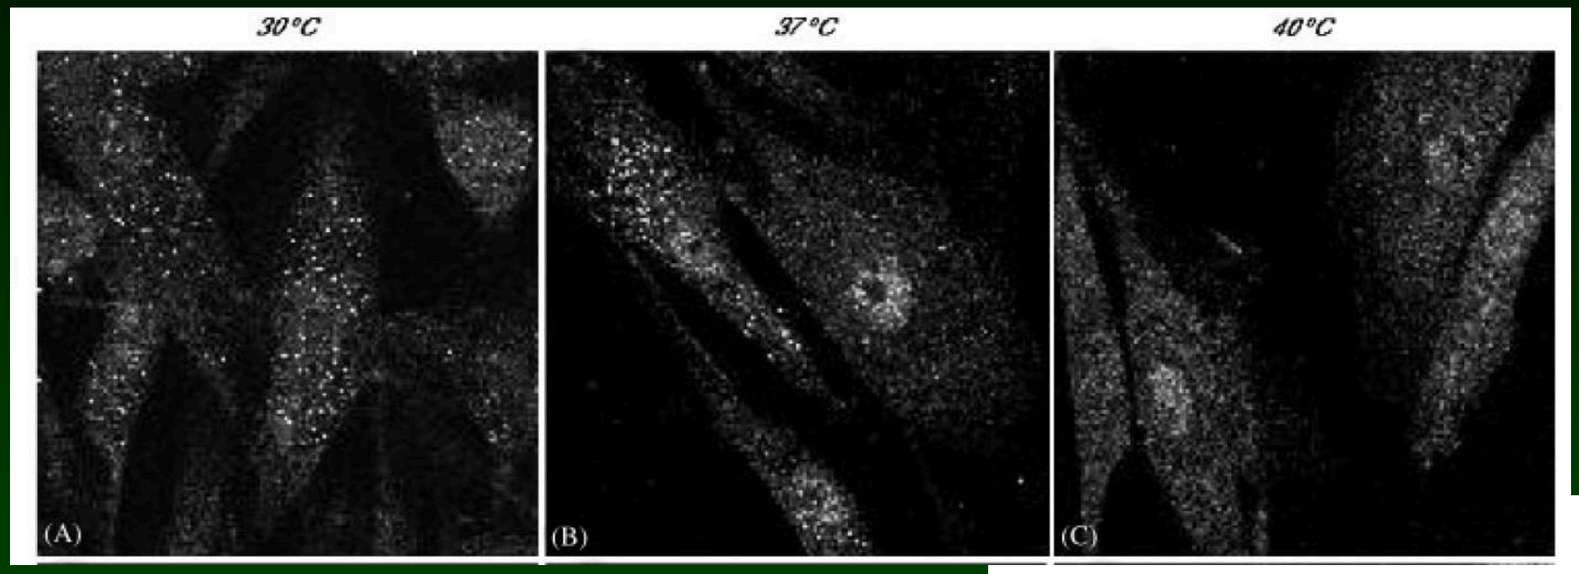
make 'muscle' cells from any cell





DMD/BMD diagnosis

T-sensitive



low T: dampens
high T: exaggerates

HUMAN MUTATION 24:130–139 (2004)

RESEARCH ARTICLE

Identification of the Molecular Defect in Patients With Peroxisomal Mosaicism Using a Novel Method Involving Culturing of Cells at 40°C: Implications for Other Inborn Errors of Metabolism

Jeannette Gootjes,[1] Frank Schmohl,[1] Petra A.W. Mooijer,[2] Conny Dekker,[2] Hanna Mandel,[3] Meral Topcu,[4] Martina Huemer,[5] M. von Schütz,[6] Thorsten Marquardt,[7] Jan A. Smeitink,[8] Hans R. Waterham,[2] and Ronald J.A. Wanders[1,2*]

Normal cells

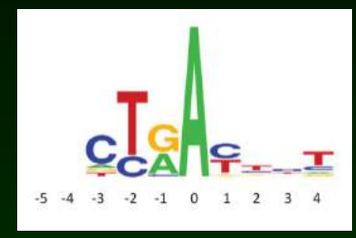
- **expression cloning variant**
  - ***dominant effect***
  - ***endogenous gene not expressed***
    - ***overexpression (recessive effects)***

- **destroy normal gene** (CRISPR/Cas)
  - ***effect detectable ?***
  - ***express variant; compensation ?***

- **express specific protein domain only**
  - ***simpler expressed***
    - ***e.g DNA binding domain BRCA1 protein***

RNA

- **effect on structure / integrity**
  - ***pre mRNA splicing***
    - ***splice site (SD, SA), branchpoint, ESE / ESS / ISE / ISS***



- **altered stability / turnover**
  - ***cap-site,***
  - ***polyA adddition (signal, site)***
  - ***folding, miRNA binding***

- **altered translation dynamics**
  - ***codon usage (rare/frequent codon)***
    - ***effect on co-translational protein folding***

Advance Access published on September 30, 2014

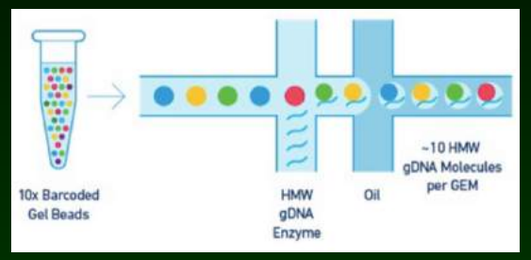
CFTR mRNA expression is regulated by an upstream open reading frame and RNA secondary structure in its 5′ untranslated region

Samuel W. Lukowski[1,2,†,*], Joseph A. Rothnagel[1] and Ann E. O. Trezise[1,2]

influence process > increase protein expression

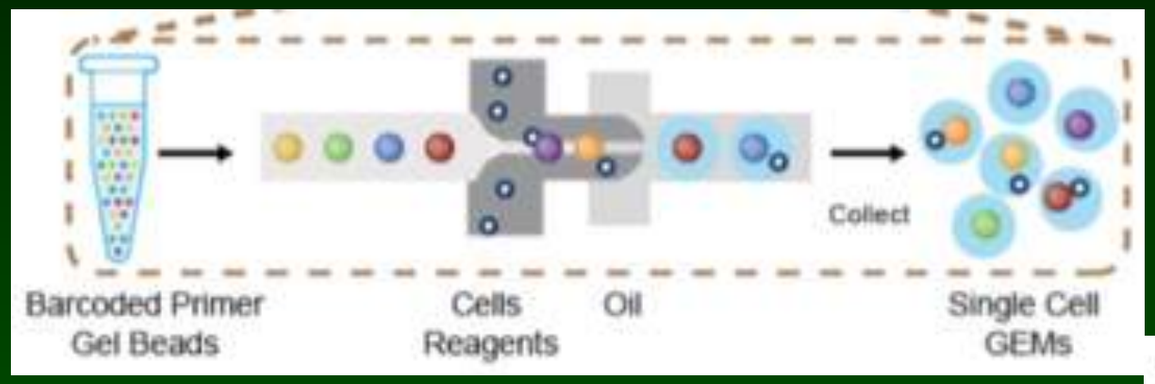
> treat CF-patients

Single cell

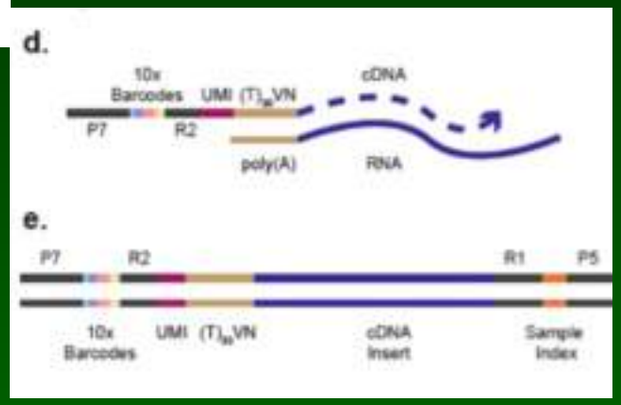


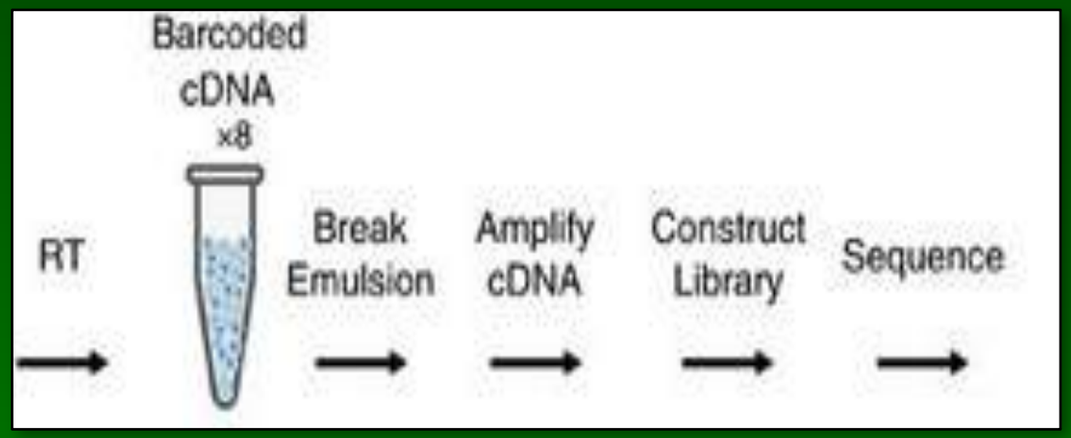
mix DNA + unique barcodes

mix single cells + unique barcodes



RT-PCR





amplify, pool, sequence

same barcode = same cell

First experiment

CELL RANGER

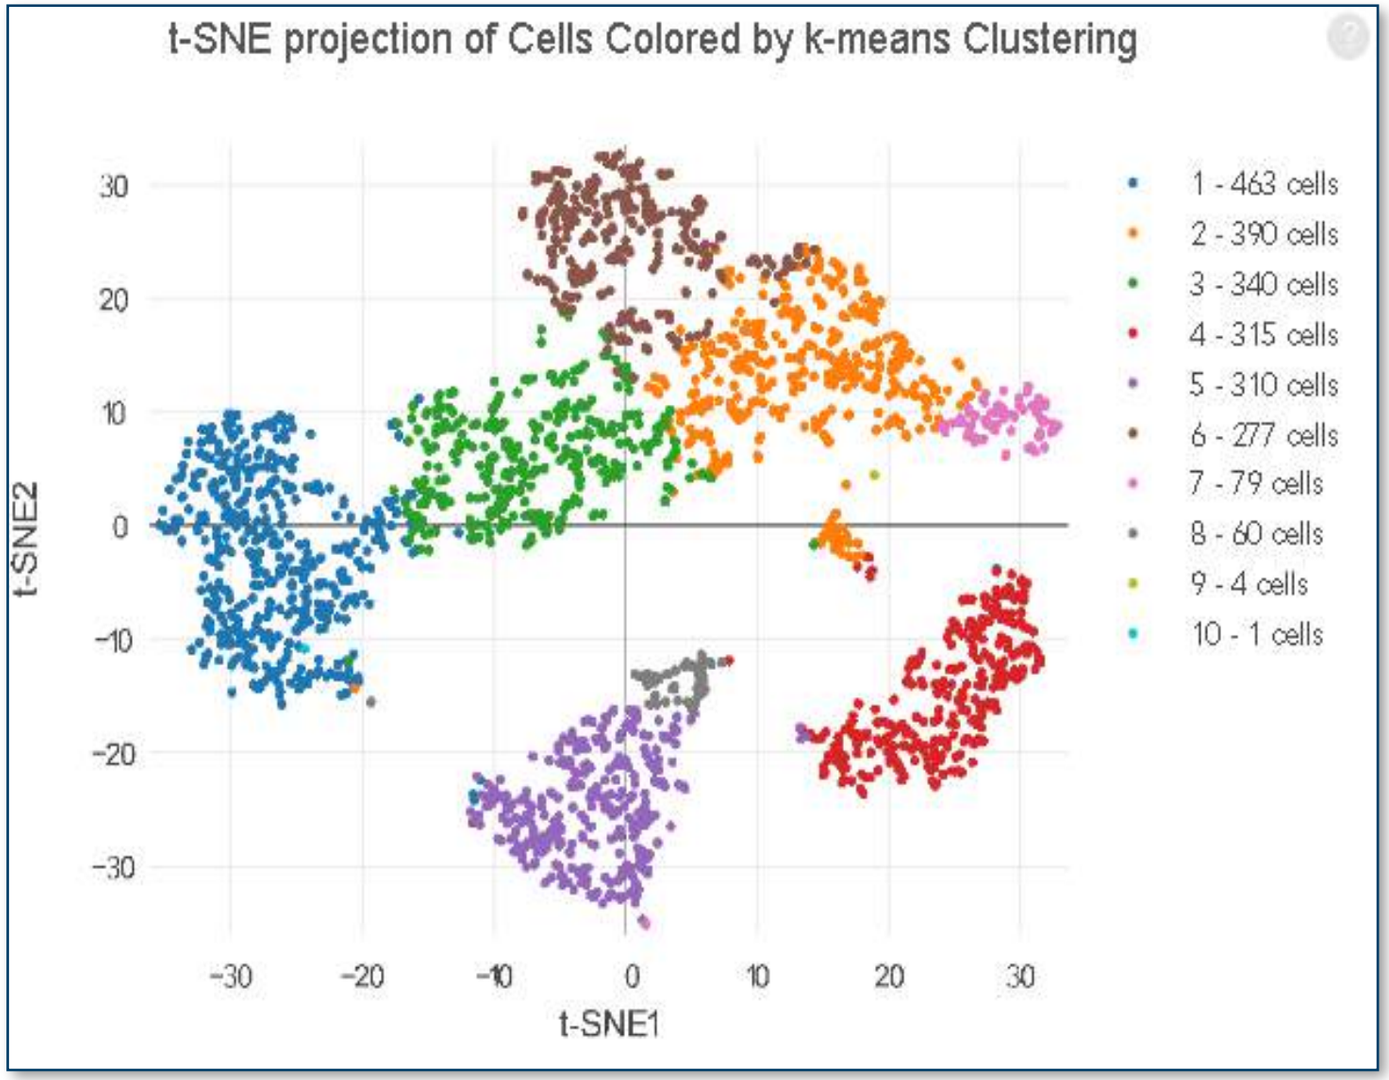
Using the Cell Ranger R package cluster cells based on differential gene expression patterns

Estimated Number of Cells
2,239

Mean Reads per Cell	Median Genes per Cell
10,480	1,128

Sequencing

Number of Reads	23,464,741
Valid Barcodes	93.0%
Reads Mapped Confidently to Transcriptome	68.9%
Reads Mapped Confidently to Exonic Regions	72.9%
Reads Mapped Confidently to Intronic Regions	7.8%
Reads Mapped Confidently to Intergenic Regions	2.6%
Sequencing Saturation	22.5%
Q30 Bases in Barcode	75.5%
Q30 Bases in RNA Read	76.6%
Q30 Bases in Sample Index	85.9%
Q30 Bases in UMI	78.4%



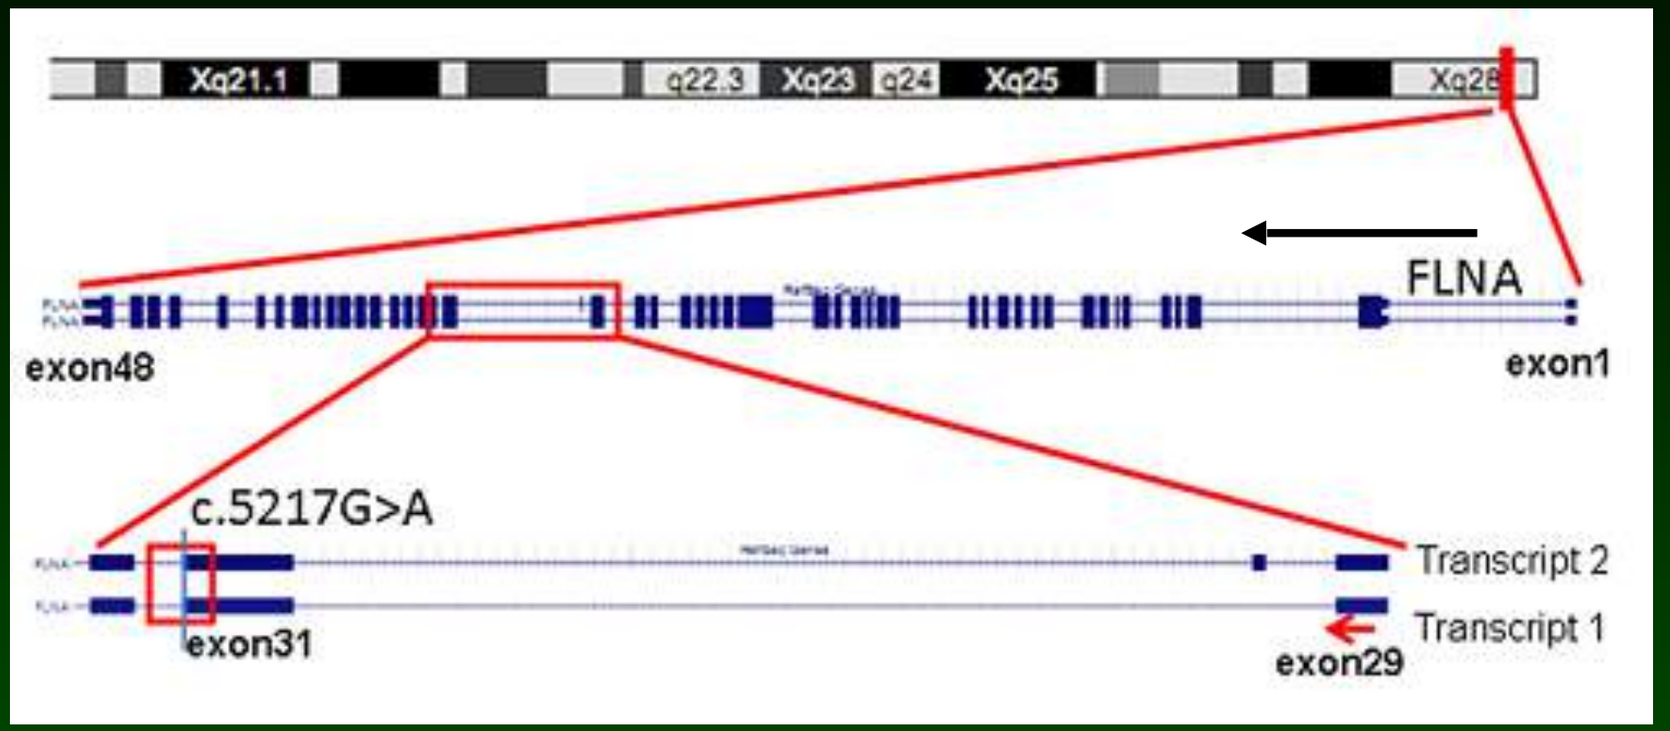
RNA splicing

- **expression cloning**
  clone exon(s) in splice construct
  transfect and express (cell line)
  analyse splice products generated

- **NOTE** *TEMPERATURE*
  artificial situation
  not complete gene/intron
  expression in other cell type (tissue specificity)

- **RNA of patient preferable**
  cell line, biopsy, …

TOD X-exome$_2$

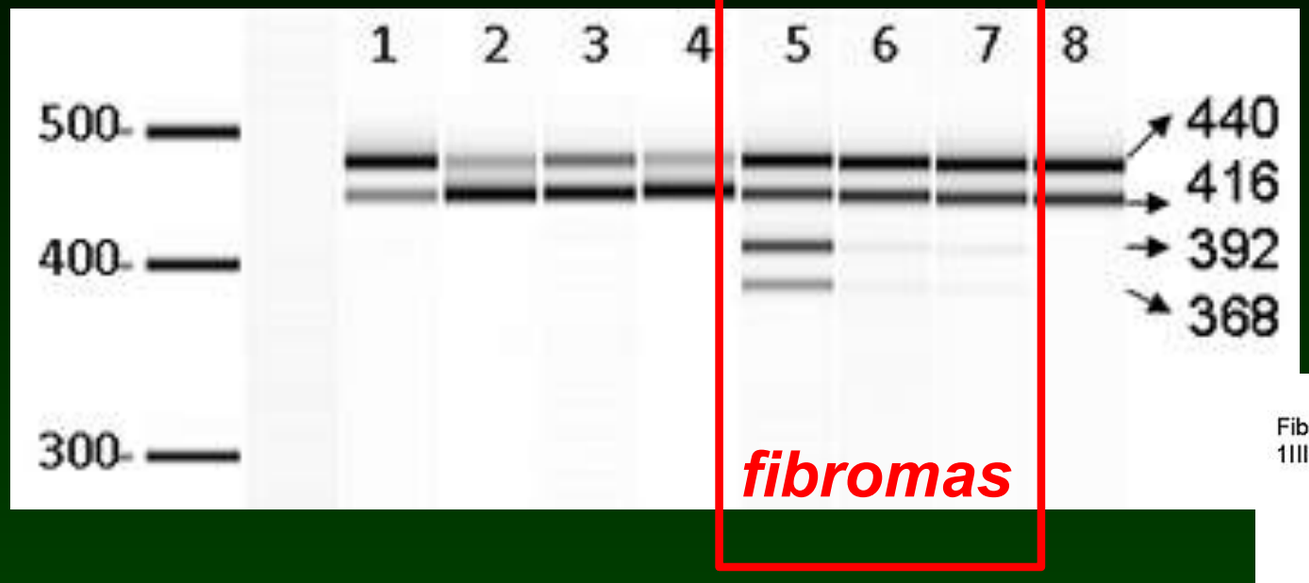


- **variant last nucleotide exon**
  alters splicing !?

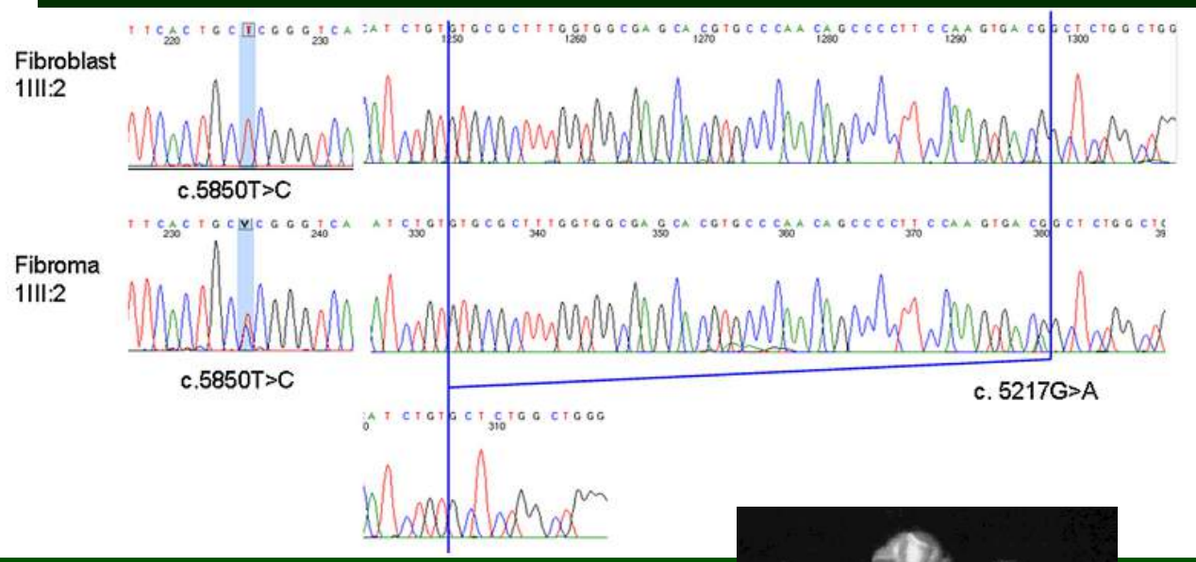
- **RNA expression**
  cultured cells / blood
    100% X_i, only normal allele expressed
  X_i always "affected chromosome"

Sun et al. 2010
Am.J.Hum.Genet. 87: 146

TOD X-exome$_3$



RNA



- **archived fibroma tissue**
  (15 year old)
  both alleles expressed
  activated cryptic exonic splice site

Sun et al. 2010 Am.J.Hum.Genet. 87: 146

X-linked TOD[4]

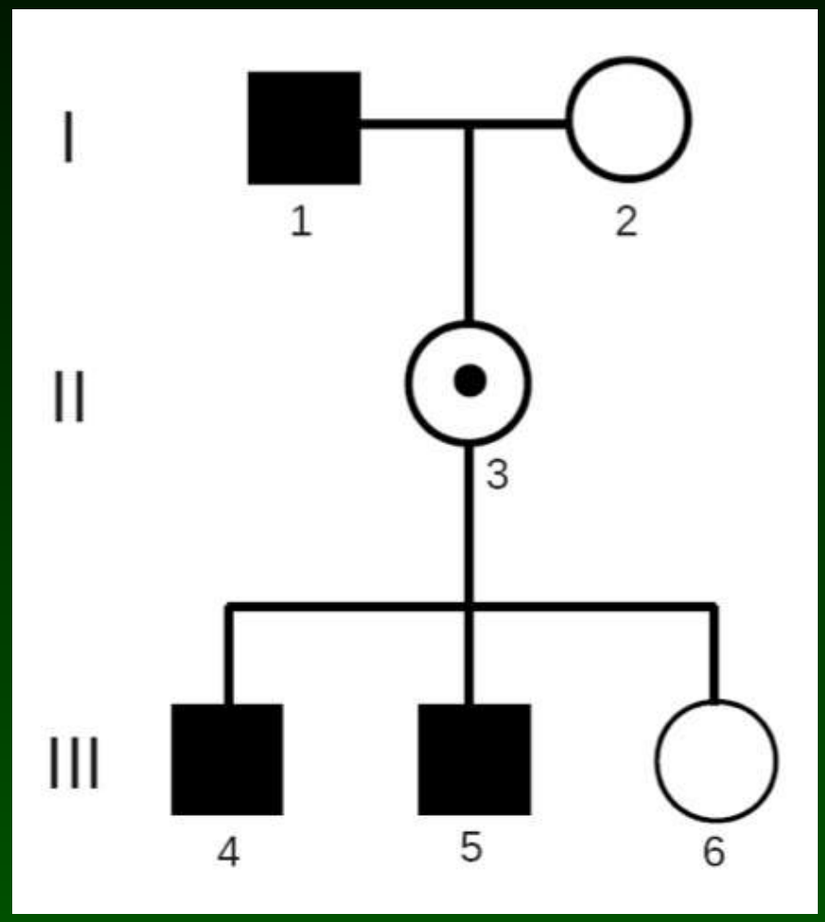
- **FLNA gene a surprise ?**
  - ***first FLNA mutations published***
  - ***the obvious candidate for TOD***
    - ***phenotypic overlap***
- **2004 gene analysed**
  - ***sent to expert > nothing reported back***
  - ***c.5217G>A was detected***
    - ***in vitro splice test negative***
- **case could be solved 6 years before**

We need to share & report ALL variants, immediately

Aarskog-Scott syndrome

- **Aarskog-Scott syndrome**
  FGD1 gene screened
  > no variants

- **whole exome capture**
  no obvious variants
  lower thresholds

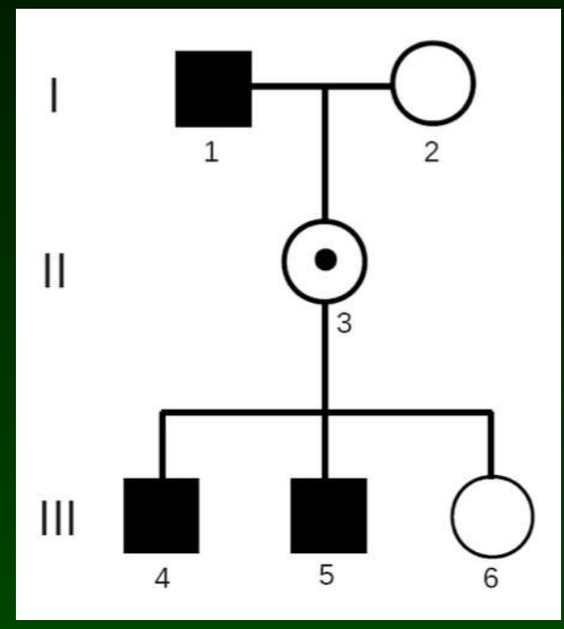


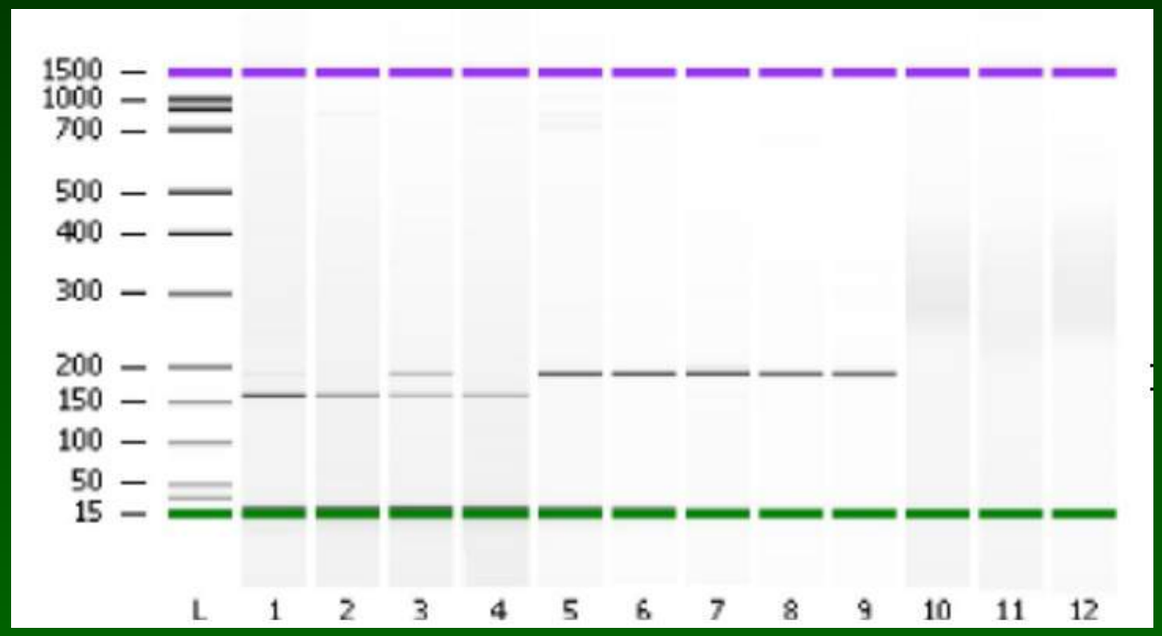
intron -35delA variant

©Yu Sun
Emmelien Aten

Aarskog-Scott syndrome

- **FGD1 intron -35delA variant**
  predicted branch site
- **RNA analysis**
  expressed in blood / fibroblasts





P P C P controls

©Yu Sun
Emmelien Aten

Aarskog-Scott syndrome

- **why FGD1 variant missed ?**
  - *primer on variant site*
    - *not standard to screen to -50*
- **exome capture**
  - *lower coverage into intron*
  - *variant filtering to -10*
    - *many additional variants*
    - *difficult to confirm*
- **few branch site variants**
  - *rare, easily missed,*
  - *difficult to proof*

BRIEF REPORT

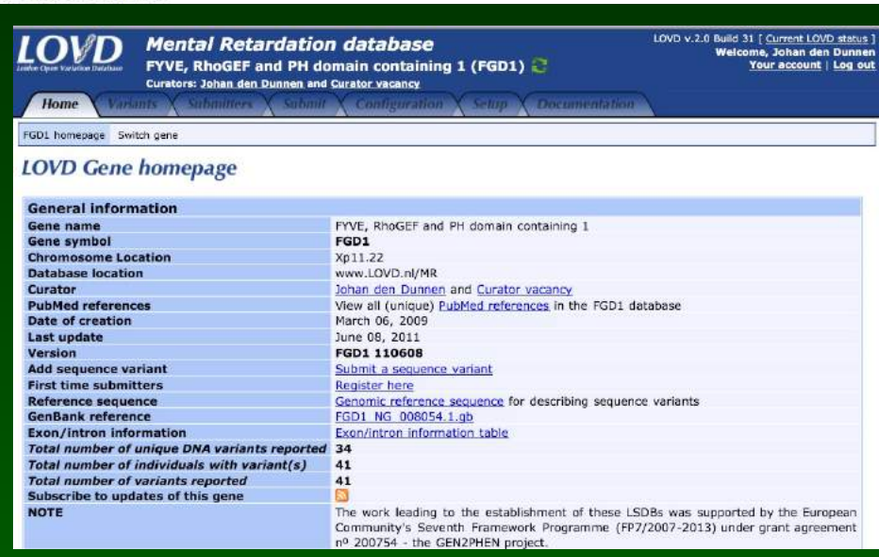
Human Mutation

OFFICIAL JOURNAL

HGVS HUMAN GENOME VARIATION SOCIETY www.hgvs.org

Exome Sequencing Identifies A Branch Point Variant in Aarskog–Scott Syndrome

Emmelien Aten,[1†] Yu Sun,[1†] Rowida Almomani,[1] Gijs W.E. Santen,[1] Tobias Messemaker,[1] Saskia M. Maas,[2] Martijn H. Breuning,[1] and Johan T. den Dunnen[1*]



www.LOVD.nl/FGD1

exome performed, RNA analysis would be simpler ...& much cheaper

Animal models

- **time consuming & costly**
  - *mouse / rat*
  - *zebra fish*
  - *Drosophila*
  - *C.elegans*
  - *yeast*
  - *...*
- **existing models ?**
  - *large international projects KO all genes*

Mouse model

- **existing model > ”no” phenotype**
  - ***realise not everything can be tested***
  - ***patient data > specific phenotyping***
